

ClockIt

Your Personal Class
Scheduler

Introduction

ClockIt, an Android app, helps students organize their class schedules, receive reminders, and visualize weekly tasks using an intuitive calendar interface.

Students often rely on screenshots of their class schedules to track their daily routines, especially at the beginning of the semester. ClockIt streamlines this process by providing an interactive and automated solution for quick and easy access to their schedule.

Target Audience

Students in high school or college

Busy Individuals needing routine

Anyone who prefers mobile organization over paper planners

Key Features

Add & Manage Classes

Title, location, time & repeated days

Location Notifications

Alerts students on how far they are from their next class.

Daily Schedule Overview

Weekly calendar with interactive day selection

Clean UI Design

Allowing for a seamless User experience

Development Process

Tools Used

Android Studio
(Kotlin + Compose)
• Firebase
– Auth & data

Architecture

MVVM pattern
– ViewModel
• Composables
– UI + state
• NavHost
– In-app routing

Version Control

• GitHub
– branching model

Challenges We Faced Pt1:

Learning Android Studio

- First time using Android Studio for a full project
- Emulator and build times were slow
- Occasional crashes made development frustrating

Firebase Integration

- Learning how to connect Firebase with the app
- Setting up authentication and user data storage
- Debugging configuration and permission errors

Relearning Concepts

- Remembering how to use Jetpack Compose syntax
- Managing state and recomposition properly
- Structuring composables and ViewModels correctly

Challenges We Faced Pt2:

Figuring Out What's Possible

- Some ideas (like push notifications) seemed simple but were complex
- Learned that sending a reminder on a phone requires:
 - Creating a Notification Channel
 - Setting up AlarmManager or WorkManager
 - Using a BroadcastReceiver to trigger the notification
